Naing Ye Htut

jaycoab2@gmail.com github.com/Jayyy-mark | 09676067433 | Taungoo, Bago, Myanmar

Key skills

- Software Engineering
- Backend Engineering
- Backend & Frontend Development
- Full Stack Software Engineering & Development
- AI Engineering
- Machine Learning
- Deep Learning
- DevOps
- Agentic AI Workflow

Education

Bachelor of Computer Science (B.C.Sc.)
University of Computer Studies, Taungoo
Expected Graduation: February 2027

Teck Stacks

Languages: Python, C#, PHP, Javascript
Backend: Flask, Django, Laravel, ASP.NET, Node/Express.js
Frontend: React/TypeScript, HTML, CSS, Tailwind, Bootstrap
Tools & Infrastructure: Git, CI/CD, Docker, Linux, Nginx, Gunicorn
AI-Assisted Development: AI coding assistants, code generation, debugging, refactoring, code review

Summary

Full Stack Developer specialized in software engineering, backend, frontend and full-stack development, Business Management applications and micro services. Strong experienced in Python, React/Typescript, Docker, server configuration & deployment, with a strong understanding of application architecture and REST API development. Also experienced in AI engineering, modelling, RAG, LLMs, and agentic workflows.

Career history

Software Engineer | Full-Stack Developer | DevOps (Freelance)
Ministry of Electricity an Energy, Myanma Oil and Gas Enterprise (MOGE)
Mar 2026 – Present
Key Responsibilities

- Analyze requirements and design system architecture, database structures, and application workflows as a Software Engineer.
- Independently develop full-stack applications across frontend, backend, REST APIs, databases, and micro services, with deployment primarily using Docker.
- Engineer RAG and agentic AI workflows using LLMs, LangGraph, LlamaIndex, embeddings, and vector databases.

Backend Engineer, DevOps (Internship)
University of Computer Studies, Taungoo · Mar 2026 – Jul 2026
Key Responsibilities

- Design and developed REST APIs, database architecture, and core application services for the university platform.
- Built and integrated a RAG-based knowledge retrieval system for processing, indexing, and querying institutional documents.
- Implemented frontend integration and application deployment mainly on Linux, server configuration, and maintenance.

Interests

- AI Engineering · ML/DL · Backend & Full-Stack Development · DevOps & Automation, Software Engineering, Full Stack Engineering
